Just down the road from us.....

Frederic Jacques has just broken yet another World paramotor record flying an Airwave glider and a Backbone paramotor unit. Frederic took off at 13:29 on 5th October 2002 at Vaumeilh (near Iragne) at an altitude of 540m, and climbed with the motor and with some wave lift assistance to a height of 5243m. The climb took him 90 minutes to reach the record altitude, beating the old record by just under 200m. Frederic was still climbing when he achieved this height, but it was so very cold that the plastic buckle holding his helmet actually cracked and broke due to the cold.

His climb rate during the attempt also broke the existing world record but the initial calculations show that it was not by a sufficient margin to be accepted by the FAI as a new record.

St André les Alpes

**SATURDAY 16-23 AUGUST 2003
SIX DAY CROSS COUNTRY COURSE**

We are again running this popular camping based XC Paragliding Course at St André. Includes transportation to launch points and retrieves after your flights, with all the personal instruction/supervision, and general assistance you require to help you make the most of your time. The course will start on Sunday morning until Friday afternoon, and is open to CP + 15 hours and is geared towards achieving distance flying but as an outline we cover the following:

CONTENT

EQUIPMENT AND PREPARATION FOR XC
ADVANCED THERMALING TECHNIQUE
SPEED FLYING TECHNIQUE
STRATEGY AND PRACTICE FOR LONG
DISTANCE FLYING
COMPETITION TECHNIQUES
NAVIGATION (IN FLIGHT NAVIGATION,
COMPASS AND GPS USAGE)

COST £380.00 (06 days course including camp site fee)
Anyone wishing to book on this should arrange flights to Nice for onward train travel to St André.

Your world... Your choice

Texas XC Distance Flying July '03

Last season Bruce Goldsmith enjoyed record breaking flying based at Edinburg in Texas. We decided to check it out and have been so impressed with the set up and the amazing potential of the area that we are running a 13 day XC camp there in July this year (exact dates to be arranged). The flying is over flatlands from a winch launch and it ought to be possible to fly major distance without running into too much unfriendly country. This trip is very much for the more experienced Pilot as there will be no instruction, just DISTANCE. Anyone interested should drop me an email and we will send out the infopack. If you have not tried towing it's easy to do a fast conversion here in the UK or on the spot in Texas.

Lightweight Harness from Supair

Those amongst us who now and again like to forgo the dubious pleasures of overcrowded sites and break away to some of the more remote, in-accessible spots where we can practice our art in solitude, have for ages longed for a truly lightweight harness that is comfortable also. The Radical lightweight from Supair is just what we always wanted. 600g without the protection and a mere 900g with, it is sure to find a way into your pack for those long walk ins.

We can supply the full range of Supair products at low European Prices – Contact us for details.

2003 fly with us

Magic 3 now certified 2/3

The new Airwave performance wing has obtained certification last month. The Magic 3, designed for the experienced Pilot looking for a serious XC machine has all the great handling characteristics we have come to expect from Airwave, together with excellent performance. See Specs. We will have Airwave demonstrators available in France this season for any client wishing to try them out. The glider received DHV 2 for the trim speed tests and DHV 2/3 for the accelerated tests. This is even better than the DHV grades for the original Magic and considering that the performance and speed of the Magic 3 are considerably better than the original Magic this is pretty impressive. Airwave will be launching production of this new wing immediately.

MAGIC				
SIZE	S	M	L	
Projected Area	21.44	23.26	25.16	Sq m
Flat Area	24.44	26.52	28.68	Sq m

Trim Speed	37	37	37	Km/h
Top Speed	53	53	53	Km/h
Certification	2-3	2-3	2-3	

NEW FROM AIRWAVE

The Wave is Airwave's newest glider and is designed for new pilots leaving school or in fact any pilot searching for a wing, which inspires confidence, but at the same time delivers the handling and performance to fly high and far. The Wave allows its pilot to relax, giving him or her the opportunity to concentrate on enjoying his flying in the knowledge that he has the highest possible degree of safety: DHV1
